Activities that may cause disruption, such as use of drones, or letting dogs off leads, are not permitted. For information on regulations, please check with park offices.

About Marine Parks

In the past, the sea around Tokyo was home to a wide variety of fish and shellfish, and offered a place to relax and enjoy activities such as swimming and fishing. The sea and areas along the sea were strongly connected to the daily lives of the people.

However, as Japan entered the period of rapid economic growth of the 1950's, large-scale land reclamation projects advanced, factories located to the area, and expansion of the port continued. As a result, the sea around Tokyo was forgotten as a part of daily life, and residents lost an area where they could easily come and experience the sea.

In response, Tokyo reviewed the role that the sea once played in lives of residents, and set out to develop parks on reclaimed land where residents can experience the sea and nature, and enjoy sports and recreation. These parks are called Marine Parks.

Marine Parks can be divided into the following three categories.

Seaside Parks

Parks established for the purpose of preserving and restoring the natural aquatic environment and providing a space for residents to enjoy water.

Port Parks

Parks established for the purpose of maintaining the port environment and providing a space for residents to enjoy the scenery.

Greenways

Parks established for the purpose of restoring the natural coastal environment in the Rinkai district, and providing a space for residents to enjoy greenery, while also providing a seamless connection between parks.

Wildlife in Marine Parks

These species have been observed in the parks. However, please note that it is not always possible for visitors to see

Fish/Shellfish

Fish such as gobies and Japanese sea bass are caught in some parks, including Wakasu Seaside Park, Jonanjima Seaside Park, and parks along canals. In recent years, young ayu fish have been observed in Odaiba Marine Park and Kasai Marine clams can be found in Odaiba Marine ma Seaside Park, these parks draw a lot of people during shellfish gathering

Crabs

Mudflats in Tokyo Port Wild Bird Park and Nagisa Forest of Oi Central Seaside Park are home to crabs such as Japanese shore crabs, Hemigrapsus penicillatus, subtropical pebble crabs, Mediterranean green crabs, and chigogani. On the basement floor of the Nature Observation Center in Tokyo Port Wild Bird Park, chigogani crabs welcome visitors, waving their claws in unison.

Birds

Birds that are often sighted along canals and at sea include great cormorants, grey ducks, pintails (winter), greater scaups (winter), black-headed gulls (winter), black-tailed gulls (summer), little grebes, and little terns (summer). Also, common kingfishers are found in Oi Central Seaside Park and Tokyo Port Wild Bird Park. More than 80 species of birds can be seen in Tokyo Port Wild Bird Park during the year. such as goshawks, shorebirds, ducks, and common moorhens.

Visitors will be introduced to the past, present, and future of the Port of Tokyo and Tokyo Waterfront City, which surround the

Touch screens show the 400-year history of land reclamation. Experience "Creation of Port: Virtual Explorer" through augmented reality and enjoy views from 100 meters above ground.

Tokyo Port Wild Bird Park also offers observation programs with content tailored to specific requests for school field trips nature events conducted by local clubs(book in advance).

A place for volunteering

Tokyo Port Wild Bird Park is also a place where volunteers engage in such activities as environmental management, providing nature education to visitors, and managing events. The park is always accepting new volunteers.

Example of events include tours of the tidal pool and exploration tours of the park. Please contact the park for more information on event schedules and other information.

East Asian-Australasian Flyway Partnership

The East Asian-Australasian Flyway Partnership is an international project in which countries and NGOs from regions where the waterfowl of Japan and other nations migrate such as the U.S., Russia, China, South Korea, Southeast Asia, and Australia work together to promote the preservation of waterfowl and the wetlands which are their habitat. Tokyo Port Wild Bird Park, together with other areas such as Yatsu-higata, Osaka Nankou Bird Sanctuary, and the mouth of the Kuma River in Kumamoto Prefecture, participates in this partnership as an important habitat for sandpipers and plovers.

Oi Central Seaside Park is a place where visitors can get closer to nature, including rich greenery and the waterfront. Visitors can enjoy a refreshing stroll in the forest, bird watching, and fishing on the shore.

Nagisa Forest Ooini Volunteer Group

The group commenced activities in September 2002 in order to raise a forest to be loved by all in the Nagisa Forest area. The group devotes its efforts to restoring the natural environment of the forest and tidal flats, cleaning the park, and making compost.

In the spring and summer, the group holds nature observation events and carries out activities aimed at educating Tokyo residents about the natural environment of Nagisa Forest.

Forest Creation Area is currently under construction and is closed to visitors, including for photography/filming. Please visit during special openings or when events are held.

About Umi-no-Mori Project

Umi-no-Mori is a project that will transform a portion of the Inner Central Breakwater Reclamation Area, located at the entrance to the Port of Tokyo, into a forest with a planned area of approximately 149 hectares (including 54 hectares of water).

2 Features

Recycling resources: Tokyo have been working to create a forest that places importance on recycling resources.including making compost from leaves and branches pruned at Tokyo parks or from roadside trees, and then mixing that with soil generated by construction projects to create soil.

Collaboration with citizens: A community project in collaboration with private enterprises was completed in fall 2015. Currently, development of the forest is continuing through weeding, thinning and so on.

Collaboration to create a forest

Composting

Tree planting

Current state of the forest

Pruned leaves and branches from landscaping work performed in the parks and for roadside trees in Tokyo's 23 wards were turned into the compost needed as the foundation to plant Umi-no-Mori This made effective use of resources and cuts costs (Completed in FY2016)

Fundraising and public appeals to support raising

have been concluded.
