Tokyo Waterfront City is a highly promising area: a location surrounded by water that offers a liberating experience and panoramic views of Tokyo, including Tokyo Gate Bridge and Tokyo Skytree.

With a wealth of tourism resources such as commercial facilities and museums, this is Tokyo’s leading tourism area. The holding of various events and other efforts are underway to heighten the brand image of the Tokyo Waterfront City and to create an attractive community.

Various disaster mitigation measures have been taken to make Tokyo Waterfront City well prepared for disasters. Ample safety has been secured to protect the city against the highest tsunami assumed in Tokyo’s report of damage estimates in the event of an earthquake directly hitting the capital, announced in April 2012.

At the time of the March 2011 earthquake and tsunami, buildings and facilities in Tokyo Waterfront City suffered no big damages from liquefaction, demonstrating that measures taken up to then were effective.
